JOIN OUR FREE ZOOM WORKSHOP:
"GLOBAL GOALS" NO-TECH CODING GAME

Looking for a fun way to bring Computer Science into your class? Signup for our **FREE ZOOM workshop on Sept 19th, 7:30 pm!** The Global Goals Game is the perfect project to integrate CS with civics, math, ELA and good old-fashioned hands-on learning for you k-8 students. Join the session for a step-by-step guide through the project and access to the project resources, game pieces, and more!

Using the UN Sustainable Development Goals as the theme, your students will construct a community grid filled with innovative ideas to support the SDGs (along with some hazards). Then it's game on as they're challenged to code their character's personal journey, collecting SDGs and avoiding hazards along the way! Early learners and newbies start with the hands-on direction cards. Level up with our digital app or your robot of choice (we will tell you our fav's). We will share lots of optional extensions for a cross curricular project that will inspire your students to imagine, design, and build a sustainable and equitable future!
