TKG INNOVATION TOUR

This workshop is designed to help educators both deepen their understanding and awareness of generative AI. We will shift between and balance both a thirty-thousand-foot, conceptual view of AI, while also recognizing both the opportunities and challenges that AI presents for classrooms by touching our keyboards and manipulating text generative AI tools. Additionally, we will establish a core framework and language that educators can adopt to facilitate meaningful discussion, decision making, and guidelines. Through the lens of “AI Dilemmas” we can use specific language to explore AI that will empower educators to have informed and thoughtful discussions. By pairing both conceptual and practical approaches to AI, session participants will increase their comfort and awareness to ideally become curious skeptics of the role AI may play in education.

Through three key lenses: educator productivity, classroom experience co-design, and student use, the second section will enhance awareness of both the capacity of AI when leveraged in meaningful ways, as well as concrete examples of AI use in the hands of students.

This workshop will help educators design a plan and path to move forward in their classroom with meaningful classroom integration.
